Preface	xvii
<hr/>	
Chapter 1: Python Data Types and Structures	1
<hr/>	
Introducing Python 3.10	2
Installing Python	2
Windows operating system • 2	
Linux-based operating systems • 3	
Mac operating system • 3	
Setting up a Python development environment	3
Setup via the command line • 3	
Setup via Jupyter Notebook • 4	
Overview of data types and objects	5
Basic data types	7
Numeric • 7	
Boolean • 8	
Sequences • 9	
<i>Strings</i> • 9	
<i>Range</i> • 10	
<i>Lists</i> • 11	
Membership, identity, and logical operations • 15	
<i>Membership operators</i> • 15	
<i>Identity operators</i> • 16	

<i>Logical operators</i> • 17	
Tuples • 18	
Complex data types	19
Dictionaries • 19	
Sets • 23	
<i>Immutable sets</i> • 26	
Python's collections module	27
Named tuples • 27	
Deque • 28	
Ordered dictionaries • 29	
Default dictionary • 29	
ChainMap object • 30	
Counter objects • 31	
UserDict • 32	
UserList • 32	
UserString • 33	
Summary	33
 Chapter 2: Introduction to Algorithm Design	 35
Introducing algorithms	35
Performance analysis of an algorithm	38
Time complexity • 38	
Space complexity • 40	
Asymptotic notation	41
Theta notation • 42	
Big O notation • 44	
Omega notation • 47	
Amortized analysis	49
Composing complexity classes	50
Computing the running time complexity of an algorithm	52
Summary	54

Exercises	55
 Chapter 3: Algorithm Design Techniques and Strategies	 57
<hr/>	
Algorithm design techniques	58
Recursion	59
Divide and conquer	60
Binary search • 61	
Merge sort • 63	
Dynamic programming	68
Calculating the Fibonacci series • 70	
Greedy algorithms	74
Shortest path problem • 76	
Summary	89
Exercises	90
 Chapter 4: Linked Lists	 93
<hr/>	
Arrays	94
Introducing linked lists	95
Nodes and pointers • 95	
Singly linked lists	98
Creating and traversing • 98	
<i>Improving list creation and traversal • 99</i>	
Appending items • 100	
<i>Appending items to the end of a list • 100</i>	
<i>Appending items at intermediate positions • 103</i>	
Querying a list • 106	
<i>Searching an element in a list • 107</i>	
<i>Getting the size of the list • 107</i>	
Deleting items • 108	
<i>Deleting the node at the beginning of the singly linked list • 108</i>	
<i>Deleting the node at the end in the singly linked list • 109</i>	

<i>Deleting any intermediate node in a singly linked list • 111</i>	
<i>Clearing a list • 113</i>	
Doubly linked lists	114
Creating and traversing • 115	
Appending items • 116	
<i>Inserting a node at beginning of the list • 116</i>	
<i>Inserting a node at the end of the list • 119</i>	
<i>Inserting a node at an intermediate position in the list • 121</i>	
Querying a list • 123	
Deleting items • 124	
Circular lists	129
Creating and traversing • 131	
Appending items • 131	
Querying a list • 134	
Deleting an element in a circular list • 134	
Practical applications of linked lists	138
Summary	139
Exercise	140
 Chapter 5: Stacks and Queues	 141
Stacks	141
Stack implementation using arrays • 145	
Stack implementation using linked lists • 148	
Push operation • 149	
Pop operation • 151	
Peek operation • 154	
Applications of stacks • 154	
Queues	157
Python's list-based queues • 159	
<i>The enqueue operation • 159</i>	
<i>The dequeue operation • 161</i>	

Linked list based queues • 163	
<i>The enqueue operation • 163</i>	
<i>The dequeue operation • 165</i>	
Stack-based queues • 166	
<i>Approach 1: When the dequeue operation is costly • 166</i>	
<i>Approach 2: When the enqueue operation is costly • 168</i>	
<i>Enqueue operation • 170</i>	
<i>Dequeue operation • 170</i>	
Applications of queues • 173	
Summary	176
Exercises	177
 Chapter 6: Trees	 179
<hr/>	
Terminology	179
Binary trees	181
Implementation of tree nodes • 184	
Tree traversal • 186	
<i>In-order traversal • 186</i>	
<i>Pre-order traversal • 188</i>	
<i>Post-order traversal • 190</i>	
<i>Level-order traversal • 191</i>	
Expression trees • 194	
<i>Parsing a reverse Polish expression • 196</i>	
Binary search trees	201
Binary search tree operations • 202	
<i>Inserting nodes • 203</i>	
<i>Searching the tree • 208</i>	
<i>Deleting nodes • 209</i>	
<i>Finding the minimum and maximum nodes • 215</i>	
Benefits of a binary search tree • 216	
Summary	219
Exercises	219

Chapter 7: Heaps and Priority Queues	221
Heaps	221
Insert operation • 224	
Delete operation • 229	
Deleting an element at a specific location from a heap • 234	
Heap sort • 236	
Priority queues	237
Summary	244
Exercises	244
Chapter 8: Hash Tables	247
Introducing hash tables	248
Hashing functions • 249	
Perfect hashing functions • 251	
Resolving collisions	252
Open addressing • 254	
<i>Linear probing</i> • 254	
Implementing hash tables	256
Storing elements in a hash table • 257	
Growing a hash table • 258	
Retrieving elements from the hash table • 260	
Testing the hash table • 262	
Implementing a hash table as a dictionary • 263	
<i>Quadratic probing</i> • 264	
<i>Double hashing</i> • 267	
Separate chaining • 272	
Symbol tables	278
Summary	279
Exercise	279

Chapter 9: Graphs and Algorithms **281**

Graphs	281
Directed and undirected graphs • 283	
Directed acyclic graphs • 284	
Weighted graphs • 285	
Bipartite graphs • 285	
Graph representations	286
Adjacency lists • 287	
Adjacency matrix • 288	
Graph traversals	291
Breadth-first traversal • 291	
Depth-first search • 299	
Other useful graph methods	305
Minimum Spanning Tree • 305	
Kruskal's Minimum Spanning Tree algorithm • 306	
Prim's Minimum Spanning Tree algorithm • 309	
Summary	312
Exercises	312

Chapter 10: Searching **313**

Introduction to searching	313
Linear search	314
Unordered linear search • 315	
Ordered linear search • 317	
Jump search	320
Binary search	325
Interpolation search	331
Exponential search	337
Choosing a search algorithm	341
Summary	342
Exercise	342

Chapter 11: Sorting **345**

Technical requirements	345
Sorting algorithms	345
Bubble sort algorithms	346
Insertion sort algorithm	352
Selection sort algorithm	356
Quicksort algorithm	359
Implementation of quicksort	364
Timsort algorithm	369
Summary	374
Exercise	374

Chapter 12: Selection Algorithms **377**

Technical requirements	377
Selection by sorting	378
Randomized selection	378
Quickselect • 379	
Deterministic selection	383
Implementation of the deterministic selection algorithm • 386	
Summary	393
Exercise	393

Chapter 13: String Matching Algorithms **395**

Technical requirements	395
String notations and concepts	395
Pattern matching algorithms	397
The brute force algorithm	397
The Rabin-Karp algorithm	401
Implementing the Rabin-Karp algorithm • 403	
The Knuth-Morris-Pratt algorithm	406
The prefix function • 408	

Understanding the KMP algorithm • 410	
Implementing the KMP algorithm • 413	
The Boyer-Moore algorithm	415
Understanding the Boyer-Moore algorithm • 416	
<i>Bad character heuristic • 417</i>	
<i>Good suffix heuristic • 420</i>	
<i>Implementing the Boyer-Moore algorithm • 424</i>	
Summary	427
Exercise	427
 Appendix: Answers to the Questions	 429
 Chapter 2: Introduction to Algorithm Design	429
Chapter 3: Algorithm Design Techniques and Strategies	430
Chapter 4: Linked Lists	432
Chapter 5: Stacks and Queues	435
Chapter 6: Trees	436
Chapter 7: Heaps and Priority Queues	440
Chapter 8: Hash Tables	442
Chapter 9: Graphs and Algorithms	444
Chapter 10: Searching	445
Chapter 11: Sorting	447
Chapter 12: Selection Algorithm	451
Chapter 13: String Matching Algorithms	453
